#### 2. Citations and explanations:

The application relates to a  $\beta$ -titanium alloy. The subject matter of the application is novel because none of the documents cited in the search report describes an alloy of this type (PCT Article 33(2)).

The invention is based on the object of providing an alloy which has a good high strength with good plastic properties prior to hardening and a high fatigue strength following hardening. The object is achieved by the composition described in claims 1 and 2. Proceeding from the prior art in the search report, none of the documents provides the teaching as to how a person skilled in the art should modify the known alloys to solve the problem, which means that inventive step is present (PCT Article 33(3)).

Industrially applicable in the metals industry.
